

Mail Server Version 3.1.0.2 Firmware Update

Available Model

MS-6400、MS-6400+、MS-6410、MS-6410+、MS-6420、MS-6420+、MS-6430、MS-6440、MS-6440+、MS6440X、MS-6450、MS-6450+

Available firmware version

3.1.0.1

Attention:

01 The system WILL NOT reboot automatically after upgrading the new version. It will need 3-5 minutes to upgrade.

02 After upgrading the firmware, the format of the virus database will be eliminated. This means the anti-virus service will suspend.

There are two ways to restore:

1. Wait for the updated schedule time (the default is every 6 hours). At that time, the Clam AV service will start updating the signature. It will take 5-10 minutes, depending on network speed.
2. If you prefer shortening the period to reduce the risk, you can click [Anti-Virus > Anti-Virus Engines > Virus Code](#) to update immediately.

Update Items

Mail Server

Service Management

MODIFY the issue that Port 87 cannot be used.
